The Platform’s regression testing and factor performance return persistence are designed with the benefit of hindsight based on pervious related research. We make no representation that any

return attribution stated, including active returns, prime alpha and factors, will be persistent in the future. Backtesting historical performance and return attributions are NOT indicators of future actual results. The Platform's results and backtested performance reflect performance of a strategy that was not historically offered to investors and do not represent returns that any investor actually attained. Backtested results are calculated by the retroactive application of a model constructed on the basis of historical data and based on assumptions integral to the model, which may or may not be testable, have certain inherent limitations and are subject to losses.
